2008
E 1-5

November 18, 2008

Now offering new possibilities:

E2 SERIES PAD PRINTING MACHINES

The E2 series pad printing machines can be used now even more versatile. Profit from the possible combination of a lot of well-established and new accessories and peripheral devices.

Our picture beside shows for example the TPE 251 pad printing machine equipped in a new way to print four colours:

The two-colour-transfert-carré TFC 125 is completed by the pad sliding device, which is designed in case of individual use for two colour printing applications as well.

Together, both two colour peripheral devices reach a well-priced four-colour-print, which is realising the advantages of the transfert carré in its entirety, even though only eight jigs are necessary. The print capacity is up to approximately 800 cycles/hour.

In case your machine is equipped already with the transfert carré TFC 125, you have the possibility to upgrade it to a four colour machine by a simple mounting of the pad sliding device.

There are no further conversions or adaptations necessary. You only equip the machine with accessories for four-colour-printing (ink pots or blades, pads etc.).

Another improvement: The pad height compensators with a stroke of 25 mm are now available as a standard for the E2 series machines. Profit from this new flexibility!

As customers request increasingly to equip the TPE 251 pad printing machine (sealed inking system) with the rotating ink pot cylinder, we have completed our documentations with the option "ink pot cylinder rotating". In this way, you and your customers can profit directly from this possibility, without any further clarifications or price requests.

Please find attached our updated configuration sheets including all technical amendments.

The prices of some accessories have changed in the meantime. All prices indicated are valid from January 1st, 2009.

Additionally you receive our updated order form, the instruction sheets as well as a new leaflet showing the TPE 251 pad printing machine equipped for four-colour-printing, with transfert carré TFC 125 and pad sliding device. This leaflet is available only as pdf-file in German/English.

A new complete leaflet for the E2 series machines considering the new possibilities will appear in December 2008. We will inform you correspondingly.

Please do not hesitate to contact us for any further questions or information.

With kind regards
